Odoo 19 Functional Certification

Certified by Odoo Inc. · June 2026 · Certificate № 0001150585

[View certificate](#)

*Odoo developer with 10+ years of software experience, 6+ years focused on Odoo across v8–v18. Deep knowledge of the Odoo ORM, QWeb reports, XML views, and the security model (access rights, record rules). Led implementation and custom development for a global company operating in 20 countries — building modules from scratch, extending core ones, and currently leading the v17 → v18 migration across 80+ modules. **Odoo 19 Functional Certified (Odoo Inc., 2026).** First PR merged into the OCA, actively working toward becoming a regular contributor.*

PROFESSIONAL EXPERIENCE

ShowHeroes Group

Remote

Odoo Technical Referent

Aug 2022 – Present

- Acted as **Odoo technical referent** for the implementation and ongoing development of Odoo across **20 countries** — covering CRM, Accounting, Project, HR, Documents, Helpdesk, and Purchase in a multi-company, multi-currency environment.
- Led the **replacement of spreadsheet-based processes** across Sales, Finance, and Operations — translating manual workflows and email chains into structured Odoo pipelines with proper ownership, deadlines, and audit trails, delivering a single source of truth for each business area.
- Heavily extended the **CRM module**: custom pipeline stages per market, multi-country opportunity tracking, bidirectional sync with Project tasks, and an automated matching engine that links external revenue records to CRM opportunities — eliminating manual lookup in most cases.
- Heavily extended the **Accounting module**: multi-currency revenue planning and actuals tracking across 15+ currencies, a structured monthly financial close with activities-driven approvals and escalation rules, vendor statement management linked to journal entries with automatic payment status sync, multi-company consolidation, and inter-company rules.
- Heavily extended the **Project module**: custom task-type system with stage validation, 6 specialized project types for different business units, bidirectional CRM–task sync, workload management, and automated task duplication.
- Designed features following the **Odoo spirit** — user-focused forms, management-ready pivot reports and dashboards, and activities-driven workflows where each stage transition auto-creates the next responsible user's activity and auto-completes the previous one, keeping teams aligned without manual coordination. Built custom **QWeb reports** for finance and sales outputs.
- Applied Odoo's **security model** across all modules: designed access rights and record rules for multi-company, multi-role environments; enforced field-level visibility and ensured data isolation between companies and markets.
- Collaborated closely with functional consultants to translate business requirements into technical solutions; diagnosed and resolved production issues under time pressure across accounting, CRM, and project workflows.

- Participated as technical referent in the localization rollout for **Argentina, Italy, Germany, Peru, Finland, Sweden, Singapore, US, and Latin America** — configuring and adapting Odoo l10n modules to local accounting and invoicing requirements.
- Led the **Odoo v16 → v17 migration** of 80+ custom modules: resolved merge conflicts, updated OWL components, fixed access rules, and validated test suites post-migration. Currently leading the **v17 → v18 migration**.
- Maintained an active test suite across modules; onboarded a junior developer and established documentation and coding standards for the team.

Most Complex Project — Global Revenue Planning & Monthly Financial Close

Designed and built a system replacing a fully spreadsheet-driven monthly close process for a company operating across 10+ markets and 15+ currencies. The *forecast & actuals* layer lets sales managers and finance teams create multi-dimensional revenue forecasts (by market, agency hierarchy, sales rep, deal type, and ad format) and automatically track actuals from CRM won deals against them — surfacing forecast vs. actuals variance in pivot reports ready for board-level presentations. The *monthly close workflow* coordinates three roles (operations, finance, management) through a structured sequence of activities auto-created at each stage transition, with configurable deadlines per market, escalation rules for overdue items, and a full audit trail in the chatter. The *vendor statement management* layer replaces email threads for incoming revenue statements: each statement moves through an activities-driven approval chain, generates vendor bills directly in Odoo Accounting, and automatically marks itself as paid when linked invoices are settled. The system handles 3 contract types, 10+ countries, and 15+ currencies simultaneously.

Additional custom modules: XRechnung / ZUGFeRD e-invoicing for Germany · EBICS banking protocol integration · PEPPOL e-invoicing for European markets · Currency rate fallback extension (15+ national bank providers, caching).

Bloompark Systems

Remote

Odoo Developer

Dec 2021 – May 2022

- Delivered custom Odoo v14/v15 integrations: Edifact, Egeko, LetterXpress, DPD, and FieldService.
- Customized Inventory, Documents, CRM, Accounting, and Helpdesk modules.
- Connected 3Commas crypto bot data to Odoo Accounting for automated P&L tracking.

Slingr Low Code

Remote

Fullstack Developer

Jan 2021 – Nov 2021

- Built and maintained low-code platform features using Java Spring 5 and JavaScript (Durandal/Knockout).
- Deployed services on GCP / Kubernetes; maintained CI/CD pipelines with Jenkins.

GlobalLogic

Remote — Mendoza, AR

Java Spring Developer

2020 – 2021

- Developed microservices with Spring Cloud, Kafka, Elasticsearch, Redis, and PostgreSQL.
- Ensured code quality via JUnit 5, Mockito, Jacoco, and SonarLint.

Hospital Español de Mendoza

Mendoza, AR

Python / Odoo Developer & Fullstack Developer

Sep 2016 – Dec 2019

- **HCUD** (Python/Odoo/React/PostgreSQL): Digital Unique Medical Record — centralized patient history across hospital departments.
- **Farmacia** (Python/Odoo): Pharmacy ERP covering stock, dispensing, and sales.
- **CAEA** (Python/Odoo/SQL Server): Automated interface between the hospital accounting system and the government tax register.
- **Kronos** (Python/REST): Publisher–subscriber cross-platform integration engine inspired by microservices, connecting 5+ hospital systems via API.
- **Turnos Web** (React/Python REST): Patient-facing appointment portal.

Midas Consultores / Concatel SII

Mendoza, AR

Java Spring Developer

Jul 2014 – Mar 2016

- Built ERP and incident-management systems (ServiceOne) using Java/Spring/JSP.

ODOO MODULES BUILT — SHOWHEROES (SELECTION)

- › **CRM Extension** — custom pipelines, multi-country opportunity tracking, task sync
- › **Project Extension** — task-type system, stage validation, 6 project types
- › **l10n Extensions** — localization for AR, IT, DE, PE, FI, SE, SG, US, LATAM
- › **Stage Tracking** — full audit trail of CRM and project stage changes
- › **Revenue Allocation** — monthly allocation from revenue lines, proration, CRM rollout
- › **Currency Extension** — 15+ national bank fallback providers, caching, rate protection
- › **Account Extension** — multi-currency close, approval workflow, consolidation rules
- › **HR Suite** — attendance, holidays, expenses, appraisals, org chart, OKRs
- › **Documents Extension** — CRM/project-linked document management
- › **Revenue Planning** — external revenue ingestion, multi-currency, auto-matching to CRM
- › **Reporting Logs** — monthly close workflow with role-based approvals and escalations
- › **EBICS / PEPPOL** — banking protocol & e-invoicing integrations for EU markets

OPEN SOURCE

- First PR merged into the **Odoo Community Association (OCA)** (March 2026); actively working toward becoming a regular contributor.
- Signed OCA Contributor Agreement; engaging with the OCA community and following technical guidelines.
